

PRESS RELEASE

FOR IMMEDIATE RELEASE

25th of April

Forest Computers, in partnership with SeeReal Technologies of Dresden, Germany, is pleased to announce the arrival of the first, best 3D display in the world to Winnipeg!

As a leading supplier of services and technologies in Canada for 10 years now, Forest is extremely proud to be representing such an amazing product. Purchased only after seeing the images on the website and after considering the incredible possibilities, but without seeing the product itself, none of the staff or clients have been disappointed in any way.

“Everyone has exactly the same reaction – their jaws hit the floor when they see images and objects flying at them, and floating in front of them,” according to Paul Profeta, an owner and partner at Forest Computers. “We’re pleased to have been selected as the first partner of SeeReal Technologies in Canada. Our location in the center of Canada gives us the unique ability to service both East and West with efficiency.”

“Without reservation, it was absolutely everything we envisioned it to be, and more. It goes well beyond our expectations,” according to Stewart Hayek, also an owner and partner at Forest. “It was an investment and an undertaking to bring it here, and now that it’s here, we intend to share it with the entire country!”

“In our opinion,” Paul says, “3D visualization without cumbersome goggles or headgear is as big a milestone in technology as going from black-and-white television to colour.”

This technology can and will impact every sector in Canada. From medicine to manufacturing, informational displays to entertainment, 3D visualization will redefine the way we work and communicate. No longer will users be restricted to looking at 3D representations on a flat 2D surface! Depth is now a reality – no longer virtual!

As an example, the ability to see objects and prototypes in true-space can save countless hours and costs when designing a new product, and can easily decrease a product’s time-to-market, while making changes very easy without having to produce multiple prototypes.

In the coming weeks, Forest Computers plans to hold a media release event and invitational viewings for select clients. If you would like more information about this incredible new product, please visit their website at <http://www.forestcomputers.com> or contact paul@forestcomputers.com.
